

SUPER BLACK TONER

PRODUCT FOR QUICK BLACKENING IN TONERS OF LASER PRINTERS

Working Instructions

Spray from a distance of approximately 20-25 cm, to cover completely surface to be treated. Shake well before spraying. During treatment with SUPER BLACK TONER, the sheet must be in vertical or sloping position, not horizontal one.

Main Characteristics

- Product made of solvents mixture and other special products which, when in contact with laser printers toners, improves its photographic density.
- Simply by spraying SUPER BLACK TONER on a polyester mat sheet, printed with a laser printer, you get a photomechanic film, suitable for transferring onto an offset plate, silk screen frame etc.
- With SUPER BLACK TONER, transfer onto photomechanic film can be avoided.
