

# FOUNT CLEAN

## Product to clean offset damping circuits

### Working instructions

Product is diluted in water from 1:1 up to 1:9, according to the dirt thickness and it is poured into the wetting solution tank. It is re-circulated for 1 – 2 hours.

After having discharged the cleaning product, rinse carefully with water the whole system for many times, up to reach approx. pH 7 or circulate the wetting solution for a short time and discharge.

### Important for use on spray bar-weboffset wetting systems

During treatment with FOUNT CLEAN it is necessary to exclude the spray bars from the course in which product is used.

### Safety

Read Safety specifications before using this product.

### Packing and Storage

10 - 200 litres

12 months from production date

### Main characteristics

- Suitable to clean wetting systems that can be encrusted with ink, paper dust and other components residues.

### Physical properties

Chemical characteristics	Appearance	Colourless liquid
	pH (25°C)	13
	Boiling Point	> 100°C
	Water miscible	Yes
