

# VIX GEL

**Product for inking rollers - special mixture for colour change**

## Instructions for manual use

- Wash milling rollers with cleaning solvent
- Let inking rollers perfectly dry .
- Pour product on rollers running at minimal speed and let it act for about 3-5 minuti.
- Clean well again with plentiful water, better warm.

## Main characteristics

- Very active product, expressly developed to thoroughly eliminate inks residues from inking rollers
- It penetrates rubber pores, dissolves dried and vitrified inks without damaging the molecular structure of rollers.
- It restores previous elasticity and consistency
- Absolutely necessary when changing colours.
- Caution: avoid contact with analogue and thermal plates, since it damages coating.

## Safety

Read the Safety Data sheet before using product

## Packing and storage

0,5 liter can

12 months after production date

## Properties

|                          |               |                               |
|--------------------------|---------------|-------------------------------|
| Chemical characteristics | Appearance    | Colorless or light yellow gel |
|                          | Flash Point   | 100°C                         |
|                          | pH (25°C)     | 13                            |
|                          | Water mixable | yes                           |
